

ANNOUNCING WOMEN'S WORK

A faculty lunch group designed to share and promote the research interests and accomplishments of women faculty at the University of Virginia.

Founded by Dean Karen Van Lengen, this group will provide an informal framework for women faculty to share their research and intellectual interests with other faculty at the University. Each monthly lunch meeting will include a short research presentation by a selected faculty member followed by a question and discussion period. We began the group in October, 2006. We look forward to another interesting year of presentations.

A light lunch will be served for those who arrive at 12 noon. (Please let Alice know if you want lunch when you register.)

WHERE

Pavilion IX (home of Karen Van Lengen)

WHEN

Monthly-The first Thursday of every month during the fall and spring semesters. (12:30PM to 1:45PM)

RESERVATIONS

The group will be limited to 25 people on a first call basis. Please contact Alice Keys to reserve for each session: eak3n@virginia.edu

SCHEDULE OF PRESENTERS: 2008-9

September 4

Karin Bonding

Lecturer
McIntire School of Commerce

Global Fairness-Local

Bonding, who teaches personal finance at the Commerce School and is the President of her own company, Capital Markets Institute, Inc., will present her paper from a summer conference in South Africa. Her presentation focuses on the role of education in the alleviation of poverty in a globalized economy.

October 2

Kerry Abrams

Associate Professor

Co-Director, Center for Children, Families and the Law
School of Law

*Marriage, Immigration, and the Settlement of the West:
The Case of the Mercer Girls*

Abrams teaches Family Law, Immigration Law, and Feminist Theory. Her scholarship focuses on the intersection of immigration law and family law, including issues of culture, citizenship, gender, and the state's role in regulating marriage.

November 6

Karen Johnston

Harrison Distinguished Professor and Chair of Neurology
School of Medicine

Glucose Management in Acute Ischemic Stroke Patients

It is well known that hyperglycemic acute stroke patients have worse clinical outcomes than acute stroke patients with normal glucose levels. Ongoing research is exploring the issues of glucose regulation in acute stroke patients to assess the risk/benefit ratio of insulin infusion therapy in this population.
